

## How to replace a Technics target lamp

Remove the two screws and remove the pop up unit

Remove the very small screw (size 00) and remove the lamp cover then pull the lamp out to expose the wire

Cut off the old lamp and join the wires of the new lamp to the wire that are left. You can now easily pull the new wire through the pop up unit.

Cut the wires that you just joined together and rejoin them individually ensuring to insulate them

Reverse the disassembly process and your done
